CCTV9英语新闻：“中国防务”重装亮相马来西亚亚洲防务展

中国国家国防科技工业局组织 3 家国有军贸企业以“中国防务”国家展团形式参展，展示中国制造高端军事装备，彰显中国军工科研生产实力。

China is showcasing the latest developments in defense technology at a major defense services event in Kuala Lumpur. Last year, governments around the world spent around \$1.7 trillion on military products. Military expenditures in Asia went up by almost 5%. That's helped make Defense Services Asia an increasingly important event in the global defense industry.

Deputies of Chinese defense companies introduce Chinese military equipment to visitors at the 2016 Defence Services Asia (DSA) exhibition in Kuala Lumpur, capital of Malaysia, on April 18, 2016. Three Chinese companies, Poly Technologies, China National Precision Machinery import and Export Corporation (CPMIEC) and CETC International joined the Airbus and BAE systems in the 2016 Defence Services Asia (DSA) exhibition held in the Malaysian capital this week. Defence Services Asia started off with a bang, a simulation of Malaysian commandos tackling a hostage-taking incident.

On top of 1200 exhibitors from 60 countries displaying their eye-catching wares, the event has drawn military and police chiefs, defence ministers and their representatives from across the world.

That includes China, which sent a delegation of senior military and civilian officials. The country has a large pavilion showcasing several state-owned firms and their advanced radar and communication systems, flightless aircraft, and array of other hardware.

"As a integrated defence company, we have brought unmanned aerial vehicles, and anti-mine vehicles -- 6x6 and 8x8 -- to display, and also coastal surveillance systems. Aside from promoting our equipment in the show, we also hope to use the occasion to strengthen exchanges with our foreign counterparts for the development of civilian markets," Wang Xingye, vice president of Poly Technologies, said.

With some two dozen companies and agencies, Turkey is the largest contingent at DSA. Turkey says its experience in fighting long-running insurgencies and terrorism has helped propel the development of its security technology.

"Malaysia and Southeast Asian nations are an extremely important market for us, and -- just like for the Asia Pacific region as a whole -- critically important for us in strategic terms as well. That's why we have such a strong representation here," Suay Alpaya, deputy minister of Turkish Ministry of Defense, said.

Aside from the exhibition, this event also includes a roundtable discussion for army chiefs, as well as conferences on combatting chemical and biological explosives, and humanitarian aid and disaster relief.

"From the perspective of relationships, it's very important during DSA because we are also exploring defence diplomacy, so we are arranging government to government meetings where they can exchange about different defence and diplomacy business," Junidah Kamarruddin, deputy secretary-general of Malaysian Ministry of Defense, said.

The results of those closed door meetings may never be known. But on the business side, a number of memorandums of understanding and deals will be signed this week.
